

Advanced Capture Solution

-  Capture and recognize documents from any source
-  Automate your document flow by smart classification
-  Create customized workflows and streamline tasks
-  Lower costs, high accuracy and improve efficiency

Works on Windows or Linux systems

# What's EasySeparate?

## Automated Document Workflows

EasySeparate is a Server or Desktop application for capture, enhance and validate your documents. It's the only one-stop solution to deliver any paper or electronic documents into your business process. Your organization size does not matter, the pricing structure, flexibility and architecture make the perfect fit. The use of EasySeparate can be the recognition or classifying of invoices, insurance claims, incoming emails, etc. Let EasySeparate do calculation too. The Excel feature give access to scalable analyzing possibilities not seen before.

## Capture from any source

## Realize any required database connection

The cross-platform approach of EasySeparate delivers more to your organisation than only quality export of your data. EasySeparate meets your current IT structure starting from any multifunction peripheral to all the cloud solutions used. Workflows will start based on recognized content and applied business rules, at the same time the process is monitored. Taking away error risky manual labor, the whole workflow and data route is controlled and recorded into your database.

Intelligent Adaptive Image enhancement

Designed for any device

Device independent image enhancement by more than 20 years experience in the field of image improvement. EasyData developed algorithmics to transform paper scans to text search PDF's almost without recognition errors. Intelligent sourcing distinction on the binarization to use is applied, is it a mobile phone or document scanner? Automatically adapting the right binarization ensures the user for the best possible capture of electronic information.

## Intelligent process

After the document is scanned from an MFP, picture from a Mobile Phone, or other way, the interpretation process starts. For the user the action is effortlessly performed by just pushing a button for scanning or making the picture, That's it. EasySeparate can even accept input without user interaction by polling email accounts or download data from web portals.

EasySeparate contains a smart designer with scripting functionality that fits into any individual business process. IT employees can start designing themselves or follow a remote course at EasyData with our trained engineers. Don't pay for what you don't use, just get knowledge and licenses for what you need into your Business case. In almost all cases EasyData can provide in practical examples for your most complex document workflows. There is not much out there "that's not already done" or under development today for tomorrows requirements!

Bi-directional Database Connections

HTML5 & HTTPS

## Why we are unique

**Integrated connectors**  
Connect to any source inside your company

**Digital correspondence**  
Efficient extraction from incoming documents

**Database collaboration**  
Bi-directional communication & data validation

**Capture data on paper**  
Data Capture from any device or scan source

**Document processing**  
Smart enhancement result in the best quality

**Intelligent integration**  
Think thought out architecture that delivers

**Access to applications**  
Integrations to legacy and future solutions

**Clever workflow design**  
Document triggered routing with monitoring

**Extended recognition**  
Text, checkmarks and even handwritten text

**Intuitive user experience**  
Validation interface or reports are individual set

Structure archives and stay organized

Process incoming mail
